

TEMPO

AUDIOVISUAL COLLECTIVE MILANO · EST. 2023 LIGHT · SOUND · SPACE · TIME

Founded in 2023, TEMPO is a multidisciplinary art collective involved in the creation of audiovisual installations and performances, merging the realms of image and sound to produce enhanced, cutting-edge and unique experiences.

TEMPO stands as a collective force, inspired by the common goal of exploring innovative connections between light, sound, space and time. As architects of experiences, audiovisual sculptors and creative engineers our work lies on the values of experimentation, shared knowledge and collective thinking, leveraging creativity and technology.

TMP·26·01	SEED	Organic and artificial, nature and urban: what is sown shapes what emerges.	A/V installation	2026
TMP·26·02	IMMERSIONE	Projection mapping on a tree for the music video of Immersione by Scintilla.	Projection mapping · music video	2026
TMP·24·01	LINEA	A data-driven installation on how information binds people into a collective consciousness.	A/V installation	2024
TMP·24·02	TRAYA	A generative installation in three movements, where a self-evolving sound system drives the image in real time.	Generative installation	2024
TMP·23·01	EXSA	Archival photographs of a former prison, rewritten by a stigmergy shader that follows the traces of its own past.	Generative installation	2023
TMP·25·01	SECTION 80	A custom video mixer for Section 80's listening bar in Milano, keeping audio-reactive visuals locked to the music.	Custom software · venue	2025
TMP·LIVE	CLUB	Real-time, audio-reactive lightscapes for clubs, raves and liminal spaces, mixed live from an in-house Max/MSP system.	Live A/V	2023–
TMP·EDU·01	RE-GEN	A 50-hour electronic music course for high-school students in San Siro, built on TEMPO's own Max/MSP software.	Education	2025

SEED

SEED investigates the unstable balance between organic and artificial, nature and urban. The installation stems from an ancestral principle: what is sown shapes what emerges. Every intervention in the physical world triggers consequences that propagate through time.

In this continuous cycle, apparently opposing forces intertwine in an ongoing dialogue. The artificial feeds on the organic, the natural adapts to the geometries of the urban. They clash, contaminate each other, redefine themselves, generating hybrid forms that question the boundaries between categories we believed to be distinct.

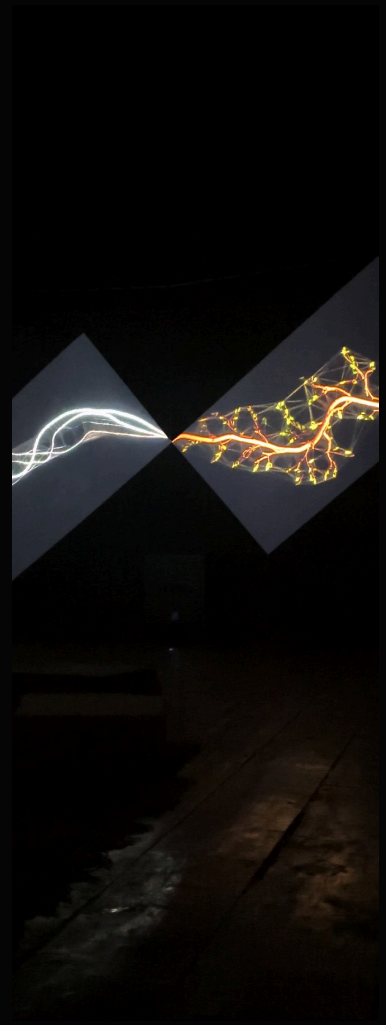

SEED becomes a space for reflection on the responsibility of our actions and on the complex ecologies generated by the encounter between systems.

IMMERSIONE

For Immersione, the song and music video by Scintilla, TEMPO mapped light onto a living tree in open landscape at night.

The projection follows the trunk and branches as a three-dimensional surface, turning the tree into the screen of the video. The video production was by Plasma; TEMPO designed and ran the videomapping.

LINEA

LINEA starts from the idea that everyone is connected, and pushes it into the realm of data analysis. It examines how digital information has become a core element of human interaction and understanding.

The work reflects on the implicit and explicit exchanges of information that bind individuals into a collective consciousness, and on the role data plays in shaping this interconnected reality.

TRAYA

TRAYA is a generative audiovisual installation in three movements.

DEVA: the divine, synthetic and ungraspable. Light as artifact, sound as prayer. ARDHA: the half-state, human and suspended, between signal and silence. BHU: the earth, fractured and breathing, a dystopian pulse of matter.

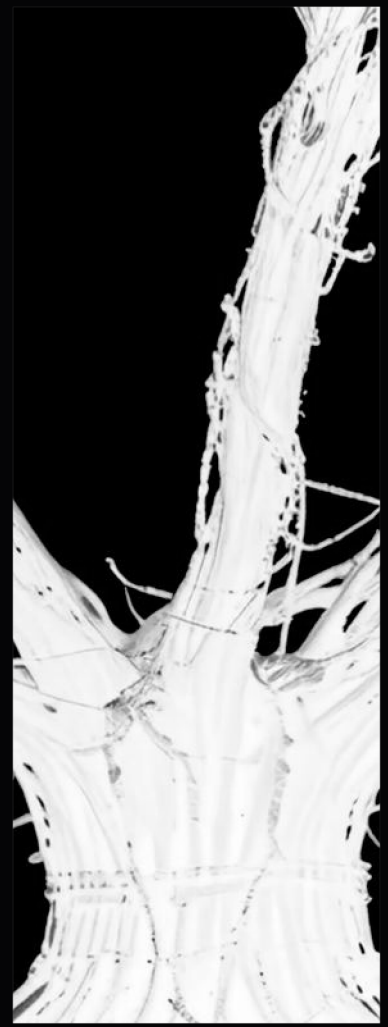

A self-evolving sound system drives the visuals in real time. Each frequency shapes the image, and each image echoes the sound.

TECHNICAL SHEET

YEAR	2024
FORMAT	Generative A/V installation

III · BHU

EXSA

A generative audiovisual installation set in the former Sant'Agata prison in Bergamo. Archival photographs of the prison re-emerge and dissolve through a custom stigmergy-based shader built in Max Jitter. Each image morphs and leaves traces that guide the next.

The sound is a quadraphonic field shaped in Ableton Live. It evolves like whispers in the cell blocks, a living system reacting to its own memory.

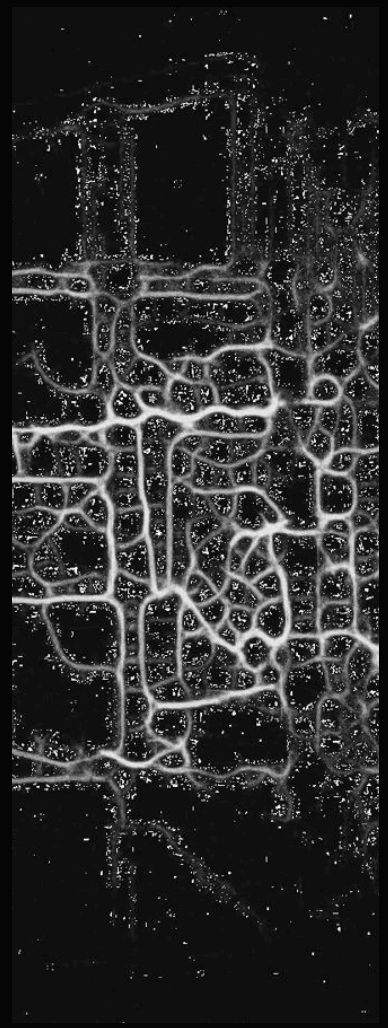

As in the prison, where every act leaves a mark for the next, the algorithm follows the invisible trails of its past: a self-organising architecture of confinement and emergence.

TECHNICAL SHEET

SECTION 80

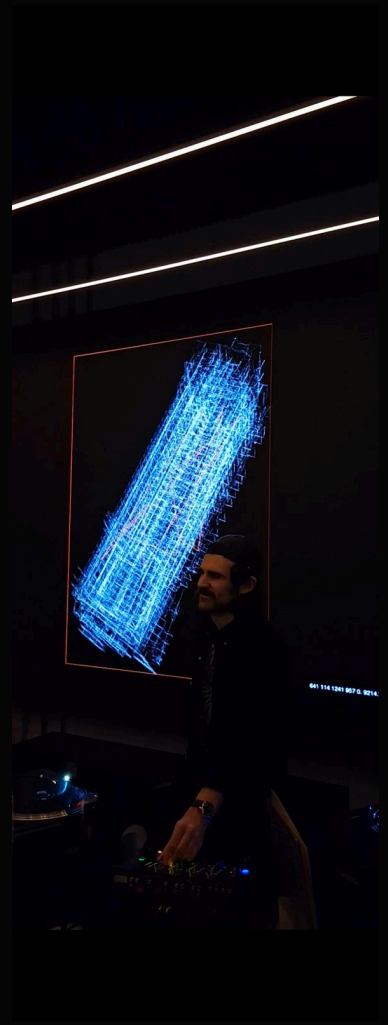

TEMPO developed custom software for the listening bar of Section 80 in Milano.

The system works as a video mixer. It moves seamlessly between a library of audio-reactive visuals, always in sync with the music, so the room's image follows whoever is playing without a dedicated operator.

Part of the visual library comes from ARCHITECTURE, an installation by TEMPO shown at Arca, Milano.

CLUB

As an audiovisual collective, TEMPO crafts real-time, audio-reactive visuals for clubs, raves and liminal spaces: immersive lightscapes where sound becomes image and rhythm shapes space.

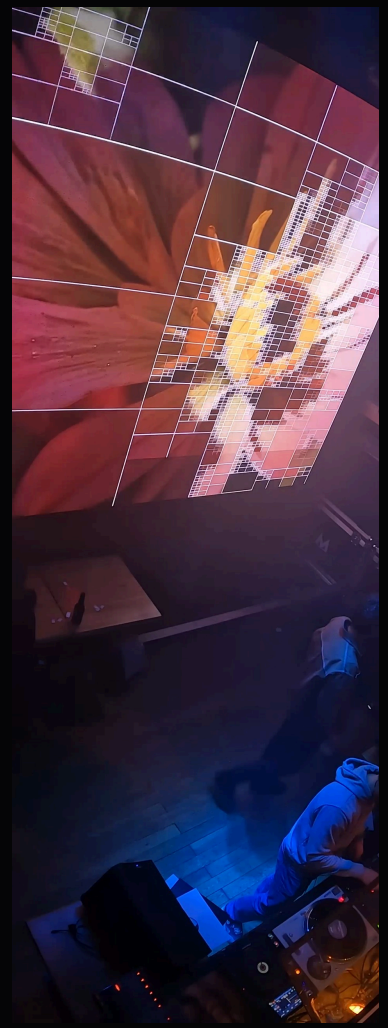

The setup is built around a custom Max/MSP patch developed in-house. It runs and mixes several real-time visuals at once and switches between them seamlessly, like a video mixer for generative content. A set of direct controls lets the performers shape parameters, textures and dynamics live.

TECHNICAL SHEET

RE-GEN

Within URBACT Re-Gen, in collaboration with Tech7 and hosted at a Politecnico di Milano hub in the San Siro district, TEMPO designed and taught a course in electronic music.

High-school students from the neighbourhood worked through composing, performing and understanding sound as a medium, using a custom Max/MSP system that the collective built and explained across the lessons.

For the final project the students recorded sounds from their own neighbourhood and reinterpreted them into new compositions and performances.
